## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

1. This Office Action is responsive to the Amendment filed on 1/14/2008.

#### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the issue fee.
3. The application has been amended as follows:  
  
In claim 24, line 1, "(withdrawn)" has been changed to --canceled--.

#### **REASONS FOR ALLOWANCE**

4. Claims 1-23 are allowed.
5. The following is an examiner's statement of reasons for allowance:  
  
Claims 1-23 are allowable over the prior art of record for the reason as stated in the Applicant's Remark dated on 1/14/2008 pages 9-12 and the reasons as below:  
  
Regarding to claim 1, none of the prior art of record teaches or suggests an apparatus for a radio communication system having a mobile node selectably operable to communicate with a network part, said apparatus for facilitating control of when control signaling is generated at the mobile node for communication to the network part, said apparatus comprising: a determiner adapted to receive indications indicating whether a prior-sent control signal sent by the mobile node has been successfully delivered to the network part; and an access-attempt-time selector operable responsive

to a determination by said determiner of less than a selected level of access to the network part of the radio communication system by the mobile node, said access-attempt-time selector for selecting when to permit transmission of a subsequent control signal by the mobile node to attempt access to the network part of the communication system. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Regarding to claim 5, none of the prior art of record teaches or suggests an apparatus for a radio communication system having a mobile node selectably operable to communicate with a network part, said apparatus for facilitating control of when control signaling is generated at the mobile node for communication to the network part, said apparatus comprising: a determiner adapted to receive indications indicating whether a prior-sent control signal sent by the mobile node has been successfully delivered to the network part; an access-attempt-time selector operable responsive to a determination by said determiner of less than a selected level of access to the network part of the radio communication system by the mobile node, said access-attempt-time selector for selecting when to permit transmission of a subsequent control signal by the mobile node to attempt access to the network part of the communication system pursuant to a network searching procedure; and a counter adapted to receive a value indicative of a number of prior network searching procedures attempted by the mobile node, said counter for maintaining a count value of the number of prior network searching procedures, said access-attempt-time selector further coupled to said counter to receive an indication of the count value, and wherein selection made by said selector

of when to permit the transmission of the subsequent control signal is, at least in part, responsive to the count value. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Regarding to claim 15, none of the prior art of record teaches or suggests a method for facilitating control of when control signaling is generated at a mobile node for communication to a network part of a radio communication system, said method comprising: determining, responsive to indications indicating whether a prior-sent control signal sent by the mobile node has been successfully delivered to the network part, whether the network part of the radio communication system is accessible by the mobile node; and selecting when to permit transmission of a subsequent control signal by the mobile node to attempt access to the network part of the communication system responsive to a determination during said operation of determining of access by the mobile node at less than a selected level of access to the network part. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Regarding to claim 23, none of the prior art of record teaches or suggests a method for facilitating control of when control signaling generated at a mobile node for communication by way of a radio link to a network part of a radio communication system, said method comprising: initiating effectuation of registration procedures of the mobile node with the network part; preventing effectuation of updating procedures by the mobile node during effectuation of the registration procedures initiated during said operation of initiating; determining whether the registration procedure initiated during

said operation of initiating results in at least access of the mobile node to the network part; and, if not selectably increasing a delay period prior to generating subsequent signals to access the network part. It would not have been obvious for a person skilled in the art to combine other prior arts of record in order to arrive at the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
